Reviews

A top quality ebook as well as the typeface used was interesting to see. It usually fails to charge an excessive amount of. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Now, to find the maximum work which can be transmitted, draw 0 A at such an angle with 0 X that its tangent is equal to twice the resistance of the whole circuit, cutting the derived curve in A. Draw the ordinate A C, cutting the characteristic curve in B; bisect A C at D. The work expended upon the generating machine would be represented by the parallelogram OCBE, the work wasted in resistance by 0 C D S, and the work developed in the receiving machine by the parallelogram S D B E. When the dynamo-machine is not a series dynamo, but the currents in the armature and in the electro-magnet, though possibly dependent upon each other are not necessarily equal, the problem is not quite so simple. We have, then, two variables, the current in the electro-magnet and the current in the armature; and the proper representation of the properties of the machine will be by a lect. Vol. I. H characteristic surface such as that illustrated by this model, Fig. 11. Of the three co-ordinate axes, 0 X represents the current in the magnet; 0 Y represents the current in the armature not necessarily to the same scale, and 0 Z the electromotive force. By the aid of such a surface as this one may deal with any problem relating to a dynamo-machine, no matter how its electro-magnets and its armature are connected together. Let us apply the...
